

Java

```
class Solution {  
    public int maxStudentsOnBench(int[][] students) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[][]} students  
 * @return {number}  
 */  
var maxStudentsOnBench = function(students) {  
  
};
```

TypeScript

```
function maxStudentsOnBench(students: number[][]): number {  
  
};
```

C++

```
class Solution {  
public:
```

```
    int maxStudentsOnBench(vector<vector<int>>& students) {  
    }  
};  
-----
```

C#

```
public class Solution {  
    public int MaxStudentsOnBench(int[][] students) {  
    }  
}
```

Kotlin

```
class Solution {  
    fun maxStudentsOnBench(students: Array<IntArray>): Int {  
    }  
}
```

Go

```
func maxStudentsOnBench(students [][]int) int {  
}
```
